

Pre-fit impact on  $\mu(tHq)$ :

$\square \theta = \hat{\theta} + \Delta\theta$   $\square \theta = \hat{\theta} - \Delta\theta$

$\Delta\mu(tHq)$   
-1.5 -1 -0.5 0 0.5 1 1.5

Post-fit impact on  $\mu(tHq)$ :

$\blacksquare \theta = \hat{\theta} + \Delta\hat{\theta}$   $\blacksquare \theta = \hat{\theta} - \Delta\hat{\theta}$
