

Pre-fit impact on $\mu(tHq)$:

$\square \theta = \hat{\theta} + \Delta\theta$ $\square \theta = \hat{\theta} - \Delta\theta$

$\Delta\mu(tHq)$
-100 -50 0 50 100

Post-fit impact on $\mu(tHq)$:

$\blacksquare \theta = \hat{\theta} + \Delta\hat{\theta}$ $\blacksquare \theta = \hat{\theta} - \Delta\hat{\theta}$
